

Stem: how the functions fit together

Blue boxes are exported; white boxes are internal. Arrows point from caller to callee.

SCSTEM_Bootstrap regenerates the data regime by regime and re-runs the whole SC-STEM procedure, clustering included, on every draw.

STEM_Fit is the single entry point: it dispatches to STEM_Estimation when $k = 1$ and to SCSTEM_Estimation when $k > 1$, with or without a penalty on beta.
