

One replication of the design at $n = 100$, $T = 365$

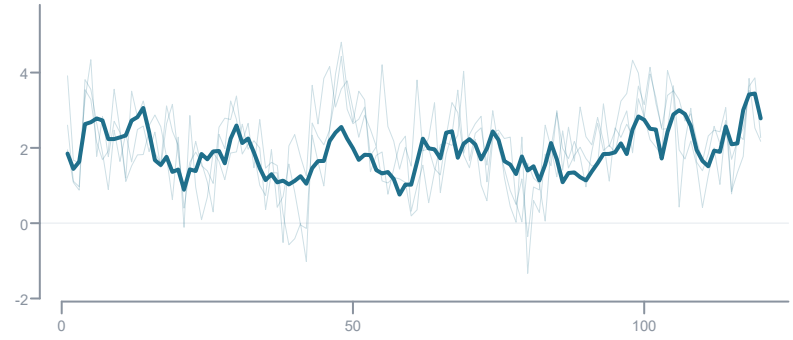

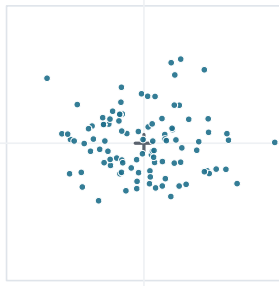

locations

the series they carry

K = 1 (pooled)

no regime at all

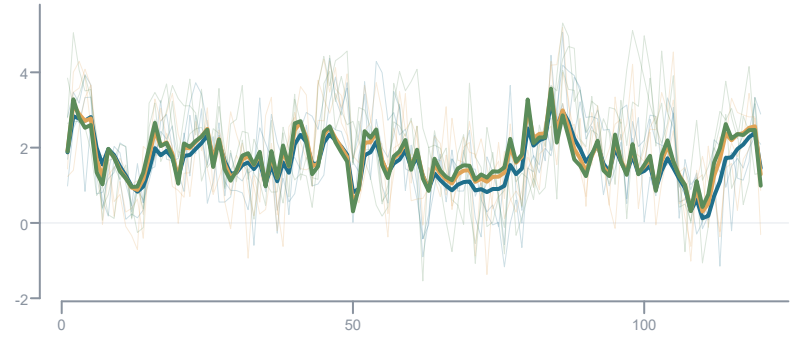

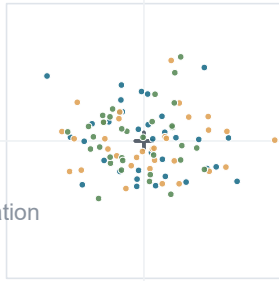

sizes 100

K = 3, omega = 0

all three contrasts, no spatial separation

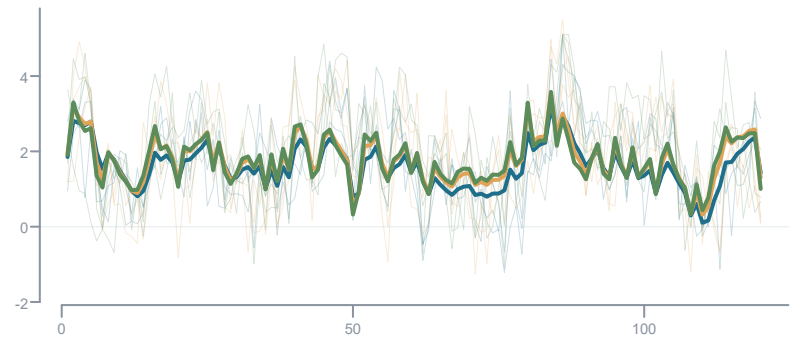

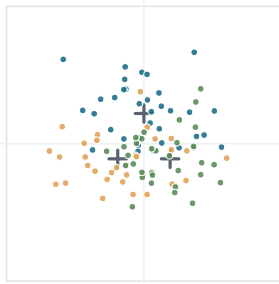

sizes 34/33/33

K = 3, omega = 0.7

all three contrasts, 1.63 sd apart

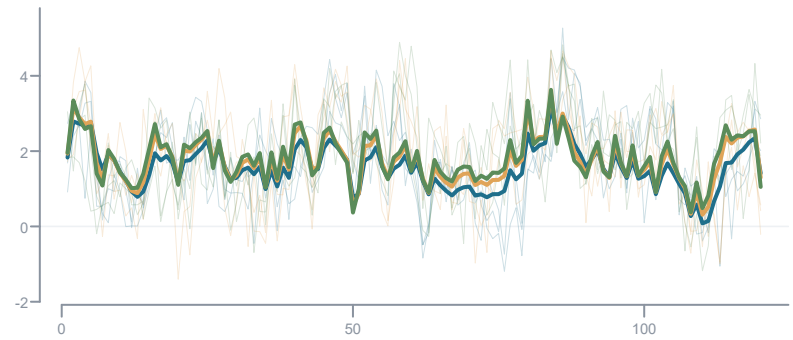

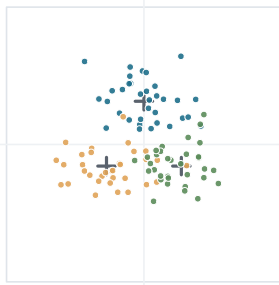

sizes 34/33/33

K = 3, omega = 1

all three contrasts, 3.16 sd apart

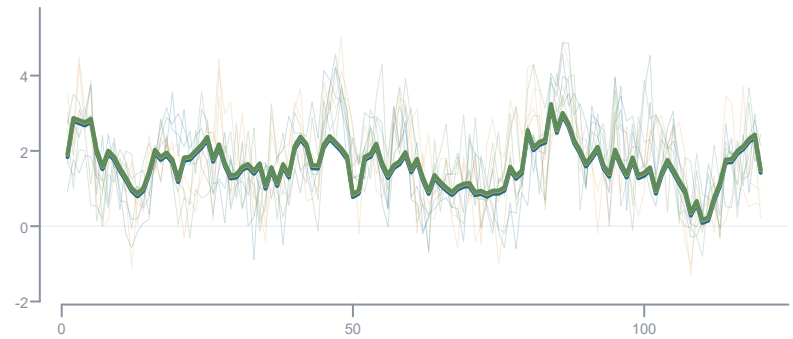

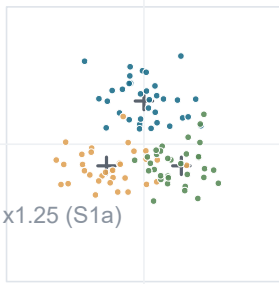

sizes 34/33/33

K = 3, omega = 1

separated in space, covariate effect x1.25 (S1a)

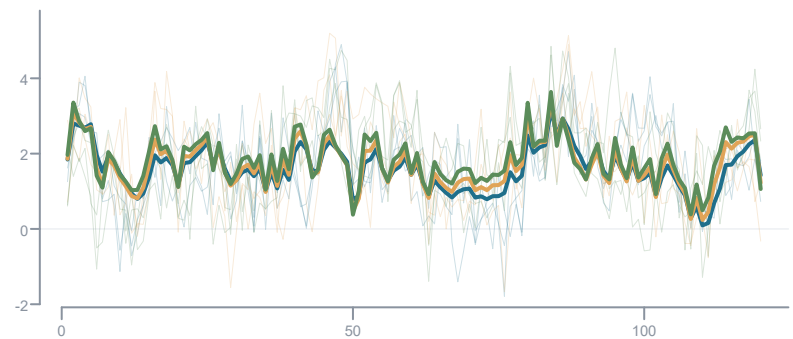

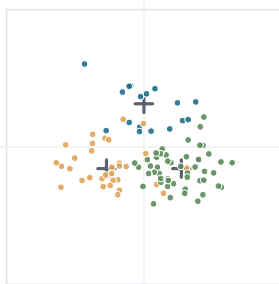

sizes 34/33/33

K = 3, omega = 1

unbalanced regimes

sizes 17/33/50

crosses mark the true centres; thin lines are three stations per regime, over the first 120 periods
thick lines are the latent process of each regime, shifted to the regime mean
